## Average Velocity (Average Rate of Change)

困 1. The height of a rocket at time $t \geq 0$ is given by $x(t)=80 t-12 t^{2}+8$. Find the average velocity of the rocket from time $t=4$ to $t=5$.
2. The following data give the distance (in feet) at a given time (in seconds) of a vehicle from its starting position. The vehicle travels in a straight line.

| Time (sec) | 0 | 0.4 | 0.8 | 1.2 | 1.6 | 2.0 | 2.4 | 2.8 | 3.2 | 3.6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Distance (ft) | 0 | 56 | 105 | 146 | 180 | 208 | 230 | 246 | 257 | 263 |

(a) Find the average velocity from $t=0.8$ to $t=3.2$.
(b) Find the average velocity from $t=1.2$ to $t=2.8$.
(c) Find the average velocity from $t=1.6$ to $t=2.4$.
(d) Use your answers from part (a), (b), and (c) to estimate the instantaneous velocity at $t=2.0$.
