

2.8 Solving Equations in One Variable

Target 2F: Graph, Solve and Analyze Rational Functions

Review of Prior Concepts

Find the least common denominator (LCD) in the following equations

a) $\frac{1}{3x} + \frac{5}{9x^2} = \frac{2}{27}$

b) $2 - \frac{3}{x+4} = \frac{12}{x^2+4x}$

c) $\frac{3x}{x+2} + \frac{2}{x-1} = \frac{5}{x^2+x-2}$

SAT Connection

[Passport to Advanced Math](#)

9. Rewrite simple rational expressions

Example: If $x > 3$, which of the following is equivalent

to $\frac{1}{\frac{1}{x+2} + \frac{1}{x+3}}$?

A) $\frac{2x+5}{x^2+5x+6}$

B) $\frac{x^2+5x+6}{2x+5}$

C) $2x+5$

D) x^2+5x+6

[Solution](#)

Solving Rational Equations

Example

- ① Multiply by the Least Common Denominator, LCD.
(to eliminate the fractions/rational expressions)

$$x + \frac{3}{x} = 4$$

- ② Solve for x .

- ③ Check for extraneous solutions.

Examples:

a) $\frac{3}{x+1} + \frac{2}{x} = 2$

b) $2 - \frac{3}{x+4} = \frac{12}{x^2+4x}$

$$1. \quad \frac{4x}{x+4} + \frac{3}{x-1} = \frac{15}{x^2+3x-4}$$

$$2. \frac{3}{x+2} + \frac{6}{x^2+2x} = \frac{3-x}{x}$$

Application of Rational Functions

Example: Consider all rectangles with an area of 182 square feet. Let x be the length of one side of such a rectangle.

- a) Express the perimeter P as a function of x .

b) Find the dimensions of the rectangle that has the least perimeter. What is the least perimeter?

Homework Assignment

p.247 #1,5,8,9

SAT Connection**Solution**

Choice B is correct. To rewrite $\frac{1}{\frac{1}{x+2} + \frac{1}{x+3}}$, multiply by $\frac{(x+2)(x+3)}{(x+2)(x+3)}$.

This results in the expression $\frac{(x+2)(x+3)}{(x+3) + (x+2)}$, which is equivalent to the expression in choice B.

Choices A, C, and D are incorrect and could be the result of common algebraic errors that arise while manipulating a complex fraction.
