Inverse Derivatives Practice

| $x$ | $f(x)$ | $f^{\prime}(x)$ | $g(x)$ | $g^{\prime}(x)$ |
| :---: | :---: | :---: | :---: | :---: |
| $(1)$ | 6 | 4 | 2 | 5 |
| 2 | 9 | 2 | 3 | 1 |
| 3 | 10 | -4 | 4 | 2 |
| 4 | -1 | 3 | 6 | 7 |

1. The functions $f$ and $g$ are differentiable for all real numbers, and $g$ is strictly increasing. The table shows given values of the functions and their first derivatives at selected values of $x$.

If $g^{-1}$ is the inverse of $g$, write the equation of the line tangent to the graph of $y=g^{-1}(x)$ at $x=2$.

$$
\begin{aligned}
& y \rightarrow g^{-1}(2) \\
& m \rightarrow\left(g^{-1}\right)^{1}(2)
\end{aligned}
$$

$$
\begin{aligned}
& y-y_{1}=m\left(x-x_{1}\right) \\
& y-1=\frac{1}{5}(x-2)
\end{aligned}
$$

$g(1)=2 \quad\left(g^{-1}\right)(2)=1$

$$
g^{\prime}(1)=5 \quad\left(g^{-1}\right)^{\prime}(2)=\frac{1}{5}
$$

| $x$ | $f(x)$ | $f^{\prime}(x)$ | $g(x)$ | $g^{\prime}(x)$ |
| :---: | :---: | :---: | :---: | :---: |
| -1 | 3 | -2 | 2 | 6 |
| 0 | -2 | -1 | 0 | -3 |
| -1 | 0 | 1 | -1 | 2 |
| 2 | -1 | 4 | 3 | -1 |

2. The functions $f$ and $g$ are differentiable for all real numbers. The table shows gives the values of the functions and their first derivatives at selected values of $x$.

Let $h(x)$ be the function given by $h(x)=f(g(x))$. Find $\left(h^{-1}\right)^{\prime}(3)$, if $h^{-1}$ is the inverse of $h$.

$$
\begin{array}{rlrl} 
& & h(1)=3 & h^{-1}(3)= \\
h(?)=3 & & h^{\prime}(1)=-4 & \left(h^{-1}\right)(3)=-\frac{1}{4} \\
h(?)=f(g(?))=3 & & \\
=f(-1)=3 & h^{\prime}(x) & =g^{\prime}(x) \cdot f^{\prime}(g(x)) & \\
\text { so, } g(?)=-1 & h^{\prime}(1) & =g^{\prime}(1) \cdot f^{\prime}(g(1)) & \\
& g(1)=-1 & & \\
\text { so, } h(1)=f(g(1)=f(-1) & =2 \cdot f^{\prime}(-1) \\
& =3 & & =2 \cdot-2 \\
& & =-4
\end{array}
$$
