DATE: $\qquad$

1. The data in the table below give selected values for the velocity, in meters/minute, of a particle moving along the $x$-axis. The velocity $v$ is a differentiable function of time $t$.

| Time $t$ (min) | 0 | 2 | 5 | 6 | 8 | 12 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Velocity $v(t)$ <br> $($ meters/min) | -3 | 2 | 3 | 5 | 7 | 5 |

a) Is there a time during the interval $0 \leq t \leq 12$ minutes when the particle is at rest?

Explain your answer.
b) Let $a(t)$ denote the acceleration of the particle at time $t$. Is there guaranteed to be a time $t=c$ in the interval $0 \leq t \leq 12$ such that $a(c)=0$ ? Justify your answer.
2. The graph below represents the velocity $v$, in feet per second of a particle moving along the $x$-axis over the time interval from $t=0$ to $t=55$ seconds.

Is there guaranteed to be a time in the interval $30 \leq t \leq 55$ such that $v^{\prime}(t)=0 \mathrm{ft} / \mathrm{sec}^{2}$ ? Justify your answer.
