### 4.3 Connecting $f^{\prime}$ and $\boldsymbol{f}^{\prime \prime}$ with the Graph of $\boldsymbol{f}$

- Example 1:

Determine the local extreme values of the function and the type of relative extrema and find any inflection points. Check your answer graphically.

$$
f(x)=-2 x^{3}+6 x^{2}-3
$$

## Example 2:

Use the graph of $f$ to identify where $f^{\prime}$ and $f^{\prime \prime}$ are positive, negative, and zero.

Use the graph of $f^{\prime}$ to estimate where $f$ is increasing and decreasing, where $f$ has relative extrema, where $f$ is concave up and concave down, and where $f$ has inflection points.

- Example 4:
The table below gives values of $f^{\prime}(x)$ and $f^{\prime \prime}(x)$ at selected values of $x$. Determine where $f(x)$ is increasing, decreasing, concave up, concave down and the $x$-value(s) of the extrema and the inflection points of $f(x)$.

| $x$ | $(-\infty,-2)$ | -2 | $(-2,0)$ | 0 | $(0,2)$ | 2 | $(2,3)$ | 3 | $(3, \infty)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $f^{\prime}(x)$ | + | 0 | + | DNE | - | - | - | 0 | + |
| $f^{\prime}(x)$ | - | 0 | + | DNE | - | 0 | + | + | + |

$\cdot \widetilde{\text { Given the graph of } f^{\prime}}(\underset{x}{ })$, describe find where $f(x)$ is increasing and decreasing and where $f(x)$ is concave up and concave down.
