## DATE:

$\qquad$
A cylindrical rubber cord is stretched at a constant rate of 2 cm per second. Assuming its volume does not change, how fast is its radius shrinking when its length is 100 cm and its radius is 10 cm . (Note: Volume of a cylinder is $V=\pi r^{2} h$ )

A trapezoidal tank with a height of 8 m , bottom base of 24 m , top base of 36 m , and width of 10 m , is being filled with water. How fast does the water level rise in the tank when the water level is 4 m high and water pours in at $20 \mathrm{~m}^{3} / \mathrm{min}$ ? (Note: Volume of a trapezoidal prism is $\left.V=\frac{1}{2}\left(b_{1}+b_{2}\right) h w\right)$
