

### 5.3 Local Extrema & Concavity

#### CONCAVITY

\*  $f$  is concave up

$f$  is concave up  $\rightarrow$

$\rightarrow$

\*  $f$  is concave down

$f$  is concave down  $\rightarrow$

$\rightarrow$

#### Test for Concavity

Must be able to get a 2<sup>nd</sup> derivative,  $f''$ , on  $(a, b)$ .

① Find where  $f'' = 0$  or  $f''$  DNE

② If  $f'' > 0$ , then  $f$  is

If  $f'' < 0$ , then  $f$  is

③ Inflection points occur where concavity changes

*Example 1*

Find where  $h(x) = 3x^2 - x^3$  is concave up and concave down and the inflection point(s) of  $h(x)$  (if any).

*Example 2*

Find where  $g(x) = xe^x$  is concave up and concave down and the inflection point(s) of  $g(x)$  (if any).

---

*Example 3*

Find where  $f(x) = x^{2/3}$  is concave up and concave down and the inflection point(s) of  $f(x)$  (if any).
