

Unit 6 (Chapter 5): Analytic Trigonometry**5.5 The Law of Sines**

Target 6D: Use Law of Sines and Law of Cosines to solve triangles

Review Prior Concepts

Solve the triangle for all missing sides and angles.

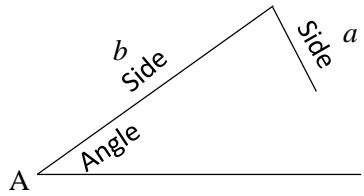

**Law of Sines**

$$\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$$

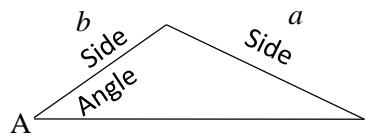

With what given conditions can Law of Sines be used?

ExampleSolve the triangle given $\angle A = 36^\circ$, $\angle B = 48^\circ$, $a = 8$.

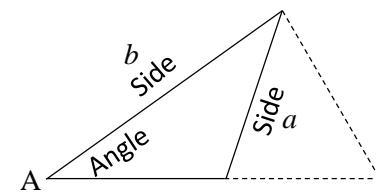

The 3 Situations of Side-Side-Angle (The Ambiguous Case)

**No Triangle**

If $a < h$, where $\sin A = \frac{h}{b}$.

**One Triangle**

If $a > h$, where $\sin A = \frac{h}{b}$,
AND $a \geq b$.

**Two Triangles**

If $a > h$, where $\sin A = \frac{h}{b}$,
AND $a < b$.

*Examples***How many triangles can be made from the given information?**

1. $\angle A = 42^\circ, a = 6, b = 7$

2. $\angle A = 42^\circ, a = 4, b = 5$

3. $\angle C = 54^\circ, b = 16, c = 17$

4. $\angle C = 54^\circ, b = 4, c = 5$

Solve each triangle with the given information or state that a triangle cannot be made.

(there may be one Δ , two Δ s, or no Δ)

5) $\angle A = 30^\circ, a = 6, b = 7$

6) $\angle B = 65^\circ, b = 11, c = 8$

7) $\angle C = 65^\circ, a = 7, c = 8$
