## 2000 AP Calculus AB FRQ (Non-Calculator)

4. Water is pumped into an underground tank at a constant rate of 8 gallons per minute. Water leaks out of the tank at the rate of $\sqrt{t+1}$ gallons per minute, for $0 \leq t \leq 120$ minutes. At time $t=0$, the tank contains 30 gallons of water.
(a) How many gallons of water leak out of the tank from time $t=0$ to $t=3$ minutes?
(b) How many gallons of water are in the tank at time $t=3$ minutes?
(c) Write an expression for $A(t)$, the total number of gallons of water in the tank at time $t$.
(d) At what time $t$, for $0 \leq t \leq 120$, is the amount of water in the tank a maximum? Justify your answer.
