

7.3 Solve Systems of Equations Using Matrices

Target 8F: Find the inverse of a matrix, if it exists, and use it to solve systems of linear equations (using technology for matrices of dimension 3×3 or greater).

Review of Prior Concepts

Find the equation of a parabola that passes through the points $(-1,9)$, $(1,5)$, and $(2,12)$ using Inverse Matrices.

More Practice**Solving Systems Using Inverse Matrices**

Augmented Matrices

Augmented Matrix – one matrix with coefficients and answers

Example:

Write the system of equations as an augmented matrix:
$$\begin{cases} x - 2y + z = 7 \\ 3x - 5y + z = 14 \\ 2x - 2y - z = 3 \end{cases}$$

Solving Augmented Matrices

To solve an augmented matrix,
use Gaussian elimination to have the matrix in **Reduced Row Echelon Form**.

Reduced Row Echelon Form:

$$\left[\begin{array}{cccc|c} 1 & 0 & 0 & \cdots & 0 & a_1 \\ 0 & 1 & 0 & \cdots & 0 & a_2 \\ 0 & 0 & 1 & \cdots & 0 & a_3 \\ \vdots & \vdots & \vdots & \ddots & \vdots & \vdots \\ 0 & 0 & 0 & \cdots & 1 & a_n \end{array} \right]$$

WATCH THIS VIDEO: https://youtu.be/0-feBnP7q_k

Examples:

menu 1. Solve the system of equations using **Reduced Row Echelon Form**:

$$\begin{cases} x - 2y + z = 7 \\ 3x - 5y + z = 14 \\ 2x - 2y - z = 3 \end{cases}$$

menu 2. Solve the system of equations using **Reduced Row Echelon Form**:

$$\begin{cases} x + y + 3z = 2 \\ 3x + 4y + 10z = 5 \\ x + 2y + 4z = 3 \end{cases}$$

menu 3. Solve the system of equations using **Reduced Row Echelon Form**:

$$\begin{cases} x - z = 2 \\ -2x + y + 3z = -5 \\ 2x + y - z = 3 \end{cases}$$

Now you try...

Solve each system of equations using **Reduced Row Echelon Form**:

$$1. \begin{cases} x + 2y + 3z = 9 \\ 2x - y + z = 8 \\ 3x - z = 3 \end{cases}$$

$$2. \begin{cases} x + z = 1 \\ x + y + z = 2 \\ x - y + z = 1 \end{cases}$$

$$3. \begin{cases} 3x + y - 6z = -10 \\ 2x + y - 5z = -8 \\ 6x - 3y + 3z = 0 \end{cases}$$
