

## Calculus AB Schedule--Unit 4/Chapter 4 and 5: Applications of Derivatives

	Monday	Tuesday	Wednesday	Thursday	Friday
<b>Week 11</b>				31-Oct	1-Nov
<b>Lesson</b>				5.1 Maximum and Minimum Values; Critical Numbers	5.1 Maximum and Minimum Values; Critical Numbers
<b>HMWK</b>				<b>HW1</b> --p.316 #7, 13,17,23,25,27,35, p.319 AP Practice #1, Calculator p.317 #66ab	<b>HW2</b> --p.317 #39, 42,51,61, p.319 AP Practice #3,6
<b>Week 12</b>	4-Nov	5-Nov	6-Nov	7-Nov	8-Nov
<b>Lesson</b>	5.1 Maximum and Minimum Values; Critical Numbers	<b>NO SCHOOL -- Election Day</b>	5.2 Mean Value Theorem	5.2 Mean Value Theorem	5.2 Mean Value Theorem
<b>HMWK</b>	<b>HW3</b> --p.317 #59, 63 p.319 AP Practice #2,5, Calculator p.317 #66,70ab	<b>No Additional Homework</b>	<b>HW4</b> --p.328 #21ab, 27ab,58, p.330 AP Practice #3, Calculator #24,29	<b>HW5</b> --p.328 #23, 22,68, p.330 AP Practice #9, Calculator #28	<b>HW6</b> --p.328 #31, 37,41, p.344 #13,17,35,37, p.347 AP Practice #4
<b>Week 13</b>	11-Nov	12-Nov	13-Nov	14-Nov	15-Nov
<b>Lesson</b>	5.3 Local Extrema and Concavity	5.3 Local Extrema and Concavity <b>Quiz 5.1 &amp; 5.2</b>	<b>EARLY DISMISSAL</b> 5.3 Local Extrema and Concavity	5.3 Local Extrema and Concavity	5.3 Local Extrema and Concavity
<b>HMWK</b>	<b>HW7</b> --p.345 #39bc,41bc,49bc, 77,79  <b>Study for Quiz 5.1 &amp; 5.2</b>	<b>HW8</b> --p.345 #63, 64, p.347 AP Practice #2,5,6  <i>November IML Math Contest after school?</i>	<b>HW9</b> --p.348 AP Practice #9,10,12, 14, Video on 2nd Derivative Test	<b>HW10</b> --p.345 #67b, 69b,91, p.347 AP Practice #1,7,8	<b>HW11</b> --p.345 #66, 81,85, p.347 AP Practice #3,4,11, 13
<b>Week 14</b>	18-Nov	19-Nov	20-Nov	21-Nov	22-Nov
<b>Lesson</b>	4.2 Linearization	4.2 Linearization <b>Quiz 5.3</b>	<b>EARLY DISMISSAL</b> 4.3 Related Rates	4.3 Related Rates	4.3 Related Rates
<b>HMWK</b>	<b>HW12</b> --p.278 #25, 27, Calculator p.278 #35,37, p.281 AP Practice #5,8  <b>Study for Quiz 5.3</b>	<b>HW13</b> --p.278 #7, 33,53, p.281 AP Practice #7, p.304 AP Review #2,6	<b>HW14</b> --p.286 #7, 9,10,11,13	<b>HW15</b> --p.286 #32, 33,34, p.291 AP Practice #9	<b>HW16</b> --p.286 #19, 22,35,39

## Calculus AB Schedule--Unit 4/Chapter 4 and 5: Applications of Derivatives

	Monday	Tuesday	Wednesday	Thursday	Friday
<b>Week 14</b>	25-Nov	26-Nov	27-Nov	28-Nov	29-Nov
<b>Lesson</b>	4.3 Related Rates	<i>Unit 4 REVIEW</i> (Book Chapters 4 & 5)	<b>NO SCHOOL --</b> Day Before Turkey Day	<b>NO SCHOOL --</b> Turkey Day	<b>NO SCHOOL --</b> Day After Turkey Day
<b>HMWK</b>	HW17--p.288 #52, p.290 AP Practice #2,3,4,5	HW18--p.303 #6, 13, AP Review #4,7a, p.384 #7,9b,21, AP Review #2,4,5,8, 11 Calculator #19	<b>No Additional Homework</b>	<b>No Additional Homework</b>	<b>No Additional Homework</b>

	2-Dec	3-Dec	4-Dec
<b>Lesson</b>	<i>Unit 4 REVIEW</i> (Book Chapters 4 & 5)	<b>Unit 4 TEST</b>	<b>EARLY DISMISSAL</b> AP Activity: Unit 4 (Book Chapters 4 & 5)
<b>HMWK</b>	<b>STUDY for TEST!!!</b>	<b>No Additional Homework</b>	<i>AP Activity: Unit 4 due Dec 11</i>

## UNIT 4: Applications of Derivatives

**FUN-4**  
A function's derivative can be used to understand some behaviors of the function.

<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.1</b> The first derivative of a function can provide information about the function and its graph, including intervals where the function is increasing or decreasing.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.2</b> The first derivative of a function can determine the location of relative (local) extrema of the function.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.3</b> Absolute (global) extrema of a function on a closed interval can only occur at critical points or at endpoints.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.4</b> The graph of a function is concave up (down) on an open interval if the function's derivative is increasing (decreasing) on that interval.</p> <p><b>FUN-4.A.5</b> The second derivative of a function provides information about the function and its graph, including intervals of upward or downward concavity.</p> <p><b>FUN-4.A.6</b> The second derivative of a function may be used to locate points of inflection for the graph of the original function.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.7</b> The second derivative of a function may determine whether a critical point is the location of a relative (local) maximum or minimum.</p> <p><b>FUN-4.A.8</b> When a continuous function has only one critical point on an interval on its domain and the critical point corresponds to a relative (local) extremum of the function on the interval, then that critical point also corresponds to the absolute (global) extremum of the function on the interval.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.9</b> Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.</p> <p><b>FUN-4.A.10</b> Graphical, numerical, and analytical information from <math>f'</math> and <math>f''</math> can be used to predict and explain the behavior of <math>f</math>.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.A</b> Justify conclusions about the behavior of a function based on the behavior of its derivatives.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.A.11</b> Key features of the graphs of <math>f</math>, <math>f'</math>, and <math>f''</math> are related to one another.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.D</b> Determine critical points of implicit relations.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.D.1</b> A point on an implicit relation where the first derivative equals zero or does not exist is a critical point of the function.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-4.E</b> Justify conclusions about the behavior of an implicitly defined function.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-4.E.1</b> Applications of derivatives can be extended to implicitly defined functions.</p>

**FUN-1**  
Existence theorems allow us to draw conclusions about a function's behavior on an interval without precisely locating that behavior.

<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-1.B</b> Justify conclusions about functions by applying the Mean Value Theorem over an interval.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-1.B.1</b> If a function <math>f</math> is continuous over the interval <math>[a, b]</math> and differentiable over the interval <math>(a, b)</math>, then the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>FUN-1.C</b> Justify conclusions about functions by applying the Extreme Value Theorem.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>FUN-1.C.1</b> If a function <math>f</math> is continuous over the interval <math>[a, b]</math>, then the Extreme Value Theorem guarantees that <math>f</math> has at least one minimum value and at least one maximum value on <math>[a, b]</math>.</p> <p><b>FUN-1.C.2</b> A point on a function where the first derivative equals zero or fails to exist is a critical point of the function.</p> <p><b>FUN-1.C.3</b> All local (relative) extrema occur at critical points of a function, though not all critical points are local extrema.</p>

**CHA-3**  
Derivatives allow us to solve real-world problems involving rates of change.

<p><b>LEARNING OBJECTIVE</b></p> <p><b>CHA-3.A</b> Interpret the meaning of a derivative in context.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>CHA-3.A.1</b> The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.</p> <p><b>CHA-3.A.2</b> The derivative can be used to express information about rates of change in applied contexts.</p> <p><b>CHA-3.A.3</b> The unit for <math>f'(x)</math> is the unit for <math>f</math> divided by the unit for <math>x</math>.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>CHA-3.D</b> Calculate related rates in applied contexts.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>CHA-3.D.1</b> The chain rule is the basis for differentiating variables in a related rates problem with respect to the same independent variable.</p> <p><b>CHA-3.D.2</b> Other differentiation rules, such as the product rule and the quotient rule, may also be necessary to differentiate all variables with respect to the same independent variable.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>CHA-3.E</b> Interpret related rates in applied contexts.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>CHA-3.E.1</b> The derivative can be used to solve related rates problems; that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.</p>
<p><b>LEARNING OBJECTIVE</b></p> <p><b>CHA-3.F</b> Approximate a value on a curve using the equation of a tangent line.</p>	<p><b>ESSENTIAL KNOWLEDGE</b></p> <p><b>CHA-3.F.1</b> The tangent line is the graph of a locally linear approximation of the function near the point of tangency.</p> <p><b>CHA-3.F.2</b> For a tangent line approximation, the function's</p>

	Monday	Tuesday	Wednesday	Thursday	Friday
the behavior of an implicitly defined function based on evidence from its derivatives.	implicitly defined functions. <b>FUN-4.E.2</b> Second derivatives involving implicit differentiation may be relations of $x$ , $y$ , and $\frac{dy}{dx}$ .			For a tangent line approximation, the function's behavior near the point of tangency may determine whether a tangent line value is an underestimate or an overestimate of the corresponding function value.
